

Dingjin has ability to design and manufacture
Spinning unit and frame structure hydraulic press with various tonnage
for various specification of vessel heads.

# High Quality Vessel Head Fabricated by Dalian Dingjin

Dalian Dingjin General Machinery Co., Ltd

# OMPANY profile

Dingjin is a professional manufacturer specialized in various vessel heads. spherical shell plates and the third classification pressure vessel. It was established in the year of 2000, its floor area is 74000m2. Dingjin has got the special equipment manufacture license of Grade A3 and A2, 1809001 Quality Certificate, and it has been identified as a national high-toch enterprise for continuous 9 years. Dingjin is the sub-committee on Boilers and Pressure Vessels, and China Forging Association. Dingjin is the governing unit of vessel heads branch and one of the editors of the national standard Heads for Pressure Vessels.

For more than a decade after starting business, Dingjin has already supplied foreign and domestic customers hundreds of thousands of various vessel heads. Product quality, delivery date and service all got good comments.

Quality Policy: Quality First, Customer Satisfaction.

Enterprise Tenet: Forging Ahead, Honesty and Trustworthiness,
Win-Win.

#### Main Processing Feature

Special Material

Large Specification

Complete types

Dingjin can fabricate vessel heads not only with carbon steel, alloy steel and stainless steel, but also have mature process technology and experience with aluminum, copper, titanium, dual-phase steel, high nickel steel as well as clad plate.

Following production capacity is for all type vessel heads with integral forming technology: Diameter \$10000mm, Thickness\$50mm (Spinning): Diameter\$6000mm, Thickness\$350mm (Stamping).

Elliptical head, torispherical head, hemispherical head, spherical crown head, toriconical head, flanged-bottom head, horn head, segment with edge, arc boiler furnace, furnace platform with outer flange, axisymmetric body head and spherical pressure vessel and so on.

Large Scale and Complete Production Equipment

Dingjin possesses large, medium, small three spinning units which are separately model Φ 10000°50mm, model Φ 95200°32mm (made in Germany), modelΦ2200°22mm. Stamping Equipment

There are 7 sets of double acting hydraulic press with following tonnage: 16000t, 8000t, 2000t (2 sets), 1000t (2 sets), 630t.

Configuration Equipment

There are 7 sets of heat treatment furnace, such as one pit electric furnace with model Φ 8300°2300mm, one set of smaller electric furnace and 5 sets of gas furnace. There is an automatic temperature control gas furnace with model 9800°1350mm and a counter type automatic temperature control gas furnace with model 97500°7500°2800.

There are 28 sets of cranes and the maximum lifting capacity is 75t.

There are 2 sets of polishing machines, 1 set of shot blasting machine, and 2 sets of CNC cutting machines.

There is one set of 9-meter Gantry planning milling boring machine made in Japan, one set of 6.3-meter CNC vertical lathe machine, one set of 1.6-meter and 3.4-meter vertical machine, and twenty sets of corollary machinine.

## **Dalian Dingjin Tenet**

Dinglin adheres to the tenet "Forging Ahead, Honesty and Trustworthines, Win-Win" and supplies qualified products with favourable prices, timely delivery, and considerate service to you. Dinglin have confidence in providing the better service and the better products during business cooperation.

#### Qualification

#### Invention Patent

Spinning Equipment

#### Production Capacity

Diameter: Ф219~10000mm (Integral Forming)

Thickness: 2°50sm

Type: Elliptical head, torispherical head, hemispherical head, conical head, toriconical head, flat bottom head, and arc bottom head and so on.

Material: All kinds of carbon steel , alloy steel, stainless steel, clad plate, cooper, aluminum and titanium.

Processing Method: cold Spinning, cold stamping, being split and pressed

Model 5030 Sninning Unit Made in Germany DNS500 X 32

Production Capacity Diameter: 01900-5500 Thickness: 32mm (Maximum)

Dinglin has rich experience to dabricate spherical head, large conical head and spherical shell plate. Each piece of petal could be switched position after grooving. The alignment tolerance for clad plate spherical head and conical head could be controlled under 1 mm.

Production Capacity Diameter:  $\Phi$ 750~2600mm Thickness: 22mm (Maximum)

2000t Three-cylinder Hydraulic Press

#### Stamping Equipment

2000t Hydraulic Press

630t Evdraulic Press

Dingiin also possesses following configuration equipment:1 set of 6.3m CNC vertical lathe machine. 1 set of 3.4m CNC vertical lathe machine. 1 set of 9m milling planning boring machine made in Japan, 1 set of 6m milling planning boring machine, 1 set of 2m boring machine, 1 set of 4m cylindrical grinder, 14 sets of horizontal lathe machine involving the ones with specification of 10m/6m/5m; automatic submerged arc welding machine, manual welding machine, argon arc welding machine; plasma cutting machine. Co2 gas shield welding machine. Copying cutting machine, automatic cutting machine, magnetic cutting machine: ultrasonic thickness gage, infrared thermometer, X-ray flaw detector, ultrasonic flaw detector and many other auxiliary equipment.

Model CW6280 Horizontal Lathe Machine 800 X 10m

Dingjin possesses a number of skilled experts, senior engineers and senior technicians who developed special processing technology for shell of revolution with spinning equipment on

site.

Dinjin has fabricated vessel heads with following special types by far: flanged oblique conical head, flanged smalleredge of conical head, flanged horn head, vessel head for furnace, cap typevessel head, stern typevessel head applied to submarine and special type rotating body.

Dingjin also processes offshore oil platform, separator internals in oil or gas or water service, conical body for beer project, offshore oil skid base.

Dingjin has successfully fabricated vessel heads with following material specification
